The IntelaVoice™ is a powerful, voice-operated switch that is safe, convenient and easy to use. By following these simple, step-by-step instructions, you will enjoy hours of using the latest in affordable home automation. As with any speech recognition system, there is a margin of error in determining what the user has said. Also, because speech recognition relies on a clear voice sample, there are instances when background noises may interfere with this clarity. Occasionally, a small percentage of people will experience difficulty operating the switch when using the pre-programmed command responses. This can be due to the acoustics of a particular room or the positioning of the switch, which is dictated by the outlet. We suggest that those users utilize the Speaker Dependent Option of programming in their own voice for optimum performance. Also consider using the LightMic accessory to increase performance in poorly positioned outlets. In addition, there will be instances where, when utilizing the standard dimmer mode of operation, the unit will occasionally false into the first command gate as noticed by the (Red) indicator light and the audible beeps. This can occur if the unit is located in a noisy area or near a lot of conversation. If it becomes annoying or false activates the unit, simply put the IntelaVoice™ into the Speaker Dependent mode or relocate the unit to a quieter environment. Please take the time to read this instruction booklet completely. You will find that we have made every effort to provide you with solutions to just about any problem you may encounter. If by chance you are experiencing unique difficulties, please feel free to call us at 858-679-8027 and one of our friendly staff members will be glad to assist you. Thank you for choosing the IntelaVoice by VOS Systems Inc. Please visit our website at www.vossystems.com and see the latest additions to our IntelaVoice™ Product Line.
Quick Start Instructions

**Step 1**
Plug the light or appliance to be controlled into the two-prong jack located on the bottom of the IntelaVoice™ switch. If the device to be controlled has a power switch, set it to the ON position before plugging it into the IntelaVoice™.

**Step 2**
Plug the IntelaVoice™ switch into a standard household outlet (120V/60Hz) AC as illustrated. Please note: a quiet environment is necessary while setting up your IntelaVoice unit for operation.

**Step 3**
The indicator light turns (RED), telling you that the unit has power and is ready to accept the PROGRAM command. If no program command is given within 5 to 10 seconds, the unit will default to the Standard Dimmer Command format. (Green) "COMPUTER" - Beeps (RED) - "HIGH", "MEDIUM", "LOW" or "OFF" whichever is desired.

**Step 4**
Wait for the (GREEN) indicator light to turn on, then give the command "COMPUTER". The (GREEN) light tells you that the unit is listening and ready to accept the command.
If the unit heard you correctly the indicator lamp will turn RED and audible beeps will be heard. Then simply say "HIGH", "MEDIUM", "LOW" or "OFF" whichever is desired.
REMEMBER, as with any speech recognition product, you must speak louder than the ambient or background noise in the room. The IntelaVoice unit is listening only when the GREEN indicator is illuminated. If you notice that the indicator lamp is not on, it's because the unit is processing noise that it just heard. Wait a moment for the indicator to turn on, then give your desired command. While conversation is going on or in the presence of a radio or television that has a lot of talking, you may find that you need to lower the volume somewhat in order to activate the IntelaVoice™. This is normal as the unit cannot decide who to listen to unless one is clearly louder than the other.

**PROGRAMMING OPTIONS**

The IntelaVoice™ has 2 programs to choose from. One preprogrammed dimmer mode and one programmable command, where the user can program in any word or in any language such as "Lights On" and "Lights Off", to turn the IntelaVoice™ ON or OFF. These 2 choices are as follows:

- "COMPUTER" / "HIGH", "MEDIUM", "LOW", or "OFF"
- "PROGRAM" (ANY WORD or WORDS) and in any language.

**IMPORTANT:**

A quiet environment is required when setting up the IntelaVoice™. Never use the medium or low levels on anything but incandescent lights as damage may occur to either the IntelaVoice™ or whatever you have plugged into it.

**TO CHOOSE A DIFFERENT PROGRAM**

Simply unplug the IntelaVoice™, wait about 15 seconds, then plug the switch back in. The indicator light will turn (RED) for 5 to 10 seconds. While the indicator light is (RED), the switch is listening for the PROGRAM command. If you say nothing the unit will automatically enter the "COMPUTER" / "HIGH", "MEDIUM", "LOW" or "OFF" command format.
"PROGRAM"

Speaker Dependent Custom mode of operation for different languages or applications. Note: This mode of operation allows you to turn On and OFF whatever is plugged into the IntelaVoice™. It is not a dimmer.

1 After plugging the IntelaVoice™ in, the indicator light will turn (RED) for approximately 5 seconds. While the indicator light is (RED) firmly give the command "PROGRAM". This will allow you to program the command word or words of your choice. If the unit heard you correctly, the indicator light will turn (AMBER) for a second or two and then turn (RED) again. NOTE: If the unit did not hear you properly, the indicator light will turn (GREEN). Unplug the unit, wait about 15 seconds and repeat step 1.

2 While the indicator light is (RED), the unit is waiting for you to say your selected command word(s). Choose any word(s), in any language and firmly say the word(s). Repeat the word(s) each time the indicator light flashes (RED). Sometimes it may be necessary to repeat the word(s) 3 or 4 times until the IntelaVoice™ feels it has a good recording of your voice. This is normal.

3 After the unit has a good recording of your first command word(s), the indicator light will quickly flash (AMBER) twice and then turn to (RED) again. If nothing is said for the next 5 seconds the indicator light will turn (GREEN) and you will have the one word(s) command you programmed in as the command that turns the unit both ON and OFF. However, you can after programming in the 1st word(s) and the indicator lamps flashes (AMBER) twice and turns to (RED), then program in another word(s) or have another user program in their word(s).

4 The IntelaVoice™ gives you the option to program in either 2 commands with one user or one command for 2 users. For example: Husband programs "Lights On" and "Lights Off" for the IntelaVoice™ in his study, but in the TV Room, husband programs "Activate" and wife programs "TV Lamp" as the command words. Just think of the possibilities to custom program any command! How about Merry Christmas or Happy New Year as festive command words. Works great with Christmas tree lights too! Have Fun! And remember to program the unit in a quiet environment and say the word(s) as you will say them in normal use.
HELPFUL HINTS

The IntelaVoice™ works best in a low noise environment. The indicator light must be (GREEN) before any command is given. Be sure to speak louder than any background noises. Speak clearly. Place the IntelaVoice™ light switch so that the unit is visible for best results or use the optional LightMic™. As in all programming modes you will notice that the indicator lamp tends to turn on and off even though you are not operating the unit. This is simply an indication that the IntelaVoice is working properly, processing the sounds it is hearing. The more noise in a room the more you will see the indicator light flashing on and off. Remember the unit will only respond to your commands when the indicator light is illuminated (GREEN). To change the programming mode of operation simply unplug the unit, wait approximately 15 seconds and repeat any of the 2 programming options. (See Programming Options). HINT: Be sure to firmly say the word as you intend to use it and stand about 4 feet away from the unit when programming in your word and always remember to do it in a reasonably quiet environment.

Remember, speech recognition is capable of misunderstanding what it heard just as we humans do, and an occasional error is not unusual. Be patient when learning to use your IntelaVoice™ and try the Speaker Dependent (Programmable) mode of operation. It works great and you and your family can have loads of fun with it using a variety of custom commands.

<tbody>
<tr>
<td>The indicator light stays (RED) after plugging the IntelaVoice™ into an outlet or the unit is NOT responding to voice commands</td>
<td>Unplug the unit for 15 seconds, then plug it back in.</td>
</tr>
<tr>
<td>IntelaVoice™ is not responding to the external microphone you plugged into it.</td>
<td>If you are not using a VOS Systems external microphone, the unit may not function properly. Also, make sure the microphone is connected correctly and the IntelaVoice™ is plugged into an AC outlet operating on 120 volts / 60Hz. Try unplugging IntelaVoice™ for 15 seconds, then plugging it back in.</td>
</tr>
<tr>
<td>The (GREEN) indicator light blinks on and off rapidly or turns amber for several seconds at a time.</td>
<td>Background noise is too loud. Reduce background noise or relocate the IntelaVoice™ switch to a quieter location.</td>
</tr>
<tr>
<td>Your voice can trigger the indicator light, but the unit doesn't switch.</td>
<td>Try using a firmer tone of voice or use the Speaker Dependent Program. See Programming Options.</td>
</tr>
<tr>
<td>Problem: You seem to be unable to activate the IntelaVoice™️</td>
<td>Solution: Try relocating the switch away from speakers, televisions, stereos or anything that might cause noise. Be certain the IntelaVoice™️ is located in an unobstructed area, clear of any objects that can block the internal microphone. You must also speak above the background noise caused by these devices in order for the switch to recognize you. It is sometimes necessary to have a few seconds of silence prior to issuing the first command.</td>
</tr>
<tr>
<td>---------------------------------------------------------------</td>
<td>---------------------------------------------------------------</td>
</tr>
<tr>
<td>The item connected to the IntelaVoice™️ turns ON and OFF at irregular intervals</td>
<td>This rarely happens, but in a very noisy room it is possible. Reduce the noise in the room or relocate the unit to a quieter environment. You can also try the Speaker Dependent (Programmable) mode of Operation.</td>
</tr>
<tr>
<td>The IntelaVoice™️ doesn't appear to have power.</td>
<td>If the IntelaVoice™️ is connected to a switched outlet, make sure the switch is turned ON for the outlet. Also, be sure the power switch is turned to the ON position for the device plugged into the IntelaVoice™️.</td>

This equipment has been tested and found to comply with the limits for a Class B
digital device, pursuant to part 15 of the FCC Rules. These limits are designed to
provide reasonable protection against harmful interference in a residential installation.
This equipment generates, uses and can radiate radio frequency energy and, if not
installed and used in accordance with the instructions, may cause harmful interference
to radio communications. However, there is no guarantee that interference will not
occur in a particular installation.

If the equipment does cause harmful interference to radio or television reception, which
can be determined by turning the equipment off and on, the user is encouraged to try
to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which
  the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
Changes or modifications not expressly approved by VOS Systems Inc. could
void the user's authority to operate the equipment.

This product was FCC certified under test conditions that included the use of shielded
I/O cables and connectors between system components. To be in compliance with
FCC regulations, the user must use shielded cables and connectors and install them
properly.

NINETY (90) DAY LIMITED WARRANTY

VOS SYSTEMS INC offers a ninety (90) day limited warranty from the date of retail purchase on the IntelaVoice™ unit. The warranty covers defects in workmanship and materials only. It does not apply to product failures resulting from incidental damage, neglect, misuse or any other cause not associated with defects in workmanship or materials. If the IntelaVoice™ proves to be defective within the ninety (90) day warranty period, the product will either be repaired or replaced at VOS SYSTEMS INC. discretion, free of charge.

To receive warranty service, return the product to us by pre-paid insured mail along with proof of purchase to the address listed below. Include your name, return address and phone number. Please include a short description of the problem you are having. DO NOT SEND THE ORIGINAL SALES RECEIPT BECAUSE IT WILL NOT BE RETURNED.

The IntelaVoice™ must be insured if it is returned. VOS SYSTEMS INC. cannot be held responsible for loss or damage to uninsured shipments. A copy of the sales receipt MUST be enclosed with the returned merchandise to qualify for warranty work. If the proof of purchase date is greater than ninety (90) days or if you fail to include the purchase date, the cost of service in effect at the time of return will be charged to you. The product should be carefully packaged to protect against mishandling during shipment. VOS SYSTEMS INC. does not authorize retailers and others to make any warranty concerning the product.

Purchasers should carefully read all documentation included with the IntelaVoice™.

SOME STATES DO NOT PERMIT TIME LIMITATIONS ON AN IMPLIED WARRANTY, OR LIMITATION OR EXCLUSION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATIONS MAY NOT PERTAIN TO YOU. THIS WARRANTY GRANTS YOU SPECIFIC LEGAL RIGHTS AND YOU MAY ALSO HAVE ADDITIONAL RIGHTS THAT VARY FROM STATE TO STATE.

THIS PARTICULAR WARRANTY SHALL DISCLAIM VOS SYSTEMS INC. OBLIGATION AND SOLE RESPONSIBILITY RESPECTING THE PRODUCT AND ALL OTHER WARRANTIES, IMPLIED OR EXPRESSED, INCLUDING IMPLIED WARRANTIES OF FITNESS FOR A SPECIFIC PURPOSE.

VOS SYSTEMS INC offers an extended warranty policy directly to consumers. This is a lifetime product replacement policy. For further information please call: 1-800-596-0061.
LightMic™

Order Form

IntelaVoice™ has a built-in omni-directional microphone for voice command detection. An optional plug-in external microphone is available, as the placement of the IntelaVoice™ switch is dictated primarily by the location of the electrical outlet. For peak performance, it is often desirable to position a microphone in a more optimum location for detecting voice commands. The LightMic™ is now available only from participating Retailers or from VOS SYSTEMS INC. For further purchasing information or a retailer near you, please call 1-800-596-0061, or you can write or email at the addresses listed below.
